

## ENGLISH

### INSTRUCTIONS FOR USE · NEOVIEW® STERILE IMPLANTS FOR HAND SURGERY · SINGLE USE

This product must be handled and/or implanted by WELL-TRAINED and QUALIFIED PERSONS, AWARE of these INSTRUCTIONS FOR USE.

#### 1. Description of the medical device

System of plates and screws for distal radius. Implants existing in different sizes.

The NEOVIEW® plates have to be fixed with the NEO screws. The NEO screws exist in Locking (L) and Non-Locking (NL) versions.

The NEOVIEW plate shall be fixed with the NEO Locking (L) screws preferentially, and with a maximum of two (2) NEO Non-Locking screws on the whole construct.

The NEOVIEW® plates are made out of PEEK (Poly Ether Ether Ketone) according to standard ASTM F2026. The NEOVIEW® plates include radiopaque markers made out of Tantalum according to ASTM F560 for radiological evaluation. The NEOVIEW® plate is sold preassembled with a single use instrument (distal block) in its packaging.

The NEO screws are made out of titanium alloy Ti-6Al-4V according to standards ISO 5832-3 and ASTM F136.

These medical devices are sold sterile. Elements sterilized using irradiation have been exposed to a minimum of 25kGy of gamma irradiation.

These devices do not contain phthalates unless this is indicated on the label.

#### 2. Indications

The NEOVIEW® Plate is intended for fixation of intra-articular and extra-articular fractures of the distal radius.

#### 3. Contraindications

The implant should not be used in a patient who has currently, or who has history of:

- acute or chronic inflammations, whether local or systemic;
- active infections;
- sensitivity/allergies to the implant materials (cf paragraph 1).

#### 4. Warnings and precautions

Physician must determine if implant is appropriate for patients who have any of the following conditions:

- Lacks good general physical condition
- Bone pathologies that may compromise the rigidity of the implant fixation (examples include: osteoporosis, acute cystic developments, acute osteopenia, bone tumor, etc..)
- Use of steroid derivatives, chemotherapy, etc..
- Drug and/or alcohol and/or smoke addiction and/or abuse
- Obesity
- Compromised wound healing
- Vascular disorder
- A patient unwilling or unable to comply with postoperative instructions

Complications may include but are not limited to:

- Pain, discomfort or abnormal sensations due to presence of the implant
- Bending, loosening and/or breakage
- Migration of the implant position
- Bone loss due to stress shielding
- Deformation recurrence, loss of correction
- Delayed union or pseudarthrosis
- Infections, hematoma, allergy, thrombosis,
- Tendon rupture, including late rupture,
- Tendon irritation/injuries,
- Heterotopic ossification,
- Compartment syndrome,
- Nerve irritation/injuries.

#### 5. Use of the implant

Knowledge of surgical techniques, proper reduction, selection and placement of implants, and post-operative patient management are considerations essential to a successful outcome. Criteria for patient selection are the responsibility of the surgeon. Each surgeon must evaluate the appropriateness of the procedure and instruments used during the procedure based on his or her own training and experience.

#### 5.1. Preoperative

- Read carefully the Surgical Technique.
- Only the instruments designed and manufactured by In2Bones should be used in combination with the implants.
- Prepare all implants and instruments necessary for the surgical procedure. Do not attempt a surgical procedure with non-functional, broken, suspect or damage instrument.

or not to remove an implant. Implant removal should be followed by careful postoperative management to avoid re-fractures. If the patient is older and has a low activity level, the surgeon may elect not to remove the implant in order to eliminate the risks of another surgery.

- The size and number of implants should be assessed based on the preoperative X-rays.
- After measurements, some implants from each adequate size should be made available to have a sufficient inventory for the surgery.
- An additional implant from each size should be made available to replace any implant that might be accidentally contaminated during the surgery.

- Before the first surgery, the surgeon and assistants should manipulate the instruments to familiarize themselves with the material.

#### 5.2. Peroperative

- The surgery should be performed by a surgeon with adequate background in orthopaedics and with respect to the different steps described in the Surgical Technique.
- Implants should be handled with care to avoid any scratch (risk of incipient break).
- Under no circumstances should the implant be modified.
- Alternative fixation methods should be available intraoperatively.
- Opening of the instruments set must be done according to aseptic condition.
- Check packaging and labeling integrity before use.
- Do not use any implant for which the packaging has been opened or damaged outside the operating theatre. Inner packaging should be handled under sterile conditions (persons/instruments).
- Use an X-ray reader screen to verify the implants positioning.
- In order to prevent tendon rupture, the NEOVIEW® Plate should be positioned proximal to the watershed line.
- The NEOVIEW plate shall be fixed with the NEO Locking (L) screws preferentially, and with a maximum of two (2) NEO Non-Locking screws on the whole construct.

#### 5.3. Postoperative

- The patient should be advised that a second more minor procedure for the removal of the implants may be necessary.
- Some X-rays should be periodically done to check the postoperative progress and prevent any complication.
- Detailed instructions on the use and limitations of the device should be given to the patient. If partial weight-bearing is recommended or required prior to firm bony union, the patient must be warned that bending, loosening or breakage of the components are complications which can occur as a result of excessive or early weight-bearing or excessive muscular activity. Postoperative care and physical therapy should be structured to prevent loading of the operative extremity until stability is evident.

- The patient should be encouraged to report to his/her surgeon any unusual changes of the operated extremity. If evidence suggests loosening of the implant (particular pain and progressive changes in the radiographs) an intensified schedule of check-ups is advised and new warning and instructions to the patient may be appropriate regarding further activity restrictions.

- The patient should be encouraged to receive prompt medical attention for any infection that could occur, whether at the operated-member level or elsewhere in the body.

- The patient should be encouraged to report to his/her surgeon any unusual changes of the operated extremity. If evidence suggests loosening of the implant (particular pain and progressive changes in the radiographs) an intensified schedule of check-ups is advised and new warning and instructions to the patient may be appropriate regarding further activity restrictions.

- The patient should be encouraged to receive prompt medical attention for any infection that could occur, whether at the operated-member level or elsewhere in the body.

- The patient should be encouraged to report to his/her surgeon any unusual changes of the operated extremity. If evidence suggests loosening of the implant (particular pain and progressive changes in the radiographs) an intensified schedule of check-ups is advised and new warning and instructions to the patient may be appropriate regarding further activity restrictions.

- The patient should be encouraged to receive prompt medical attention for any infection that could occur, whether at the operated-member level or elsewhere in the body.

- The patient should be encouraged to report to his/her surgeon any unusual changes of the operated extremity. If evidence suggests loosening of the implant (particular pain and progressive changes in the radiographs) an intensified schedule of check-ups is advised and new warning and instructions to the patient may be appropriate regarding further activity restrictions.

- The patient should be encouraged to receive prompt medical attention for any infection that could occur, whether at the operated-member level or elsewhere in the body.

- The patient should be encouraged to report to his/her surgeon any unusual changes of the operated extremity. If evidence suggests loosening of the implant (particular pain and progressive changes in the radiographs) an intensified schedule of check-ups is advised and new warning and instructions to the patient may be appropriate regarding further activity restrictions.

- The patient should be encouraged to receive prompt medical attention for any infection that could occur, whether at the operated-member level or elsewhere in the body.

- The patient should be encouraged to report to his/her surgeon any unusual changes of the operated extremity. If evidence suggests loosening of the implant (particular pain and progressive changes in the radiographs) an intensified schedule of check-ups is advised and new warning and instructions to the patient may be appropriate regarding further activity restrictions.

- The patient should be encouraged to receive prompt medical attention for any infection that could occur, whether at the operated-member level or elsewhere in the body.

- The patient should be encouraged to report to his/her surgeon any unusual changes of the operated extremity. If evidence suggests loosening of the implant (particular pain and progressive changes in the radiographs) an intensified schedule of check-ups is advised and new warning and instructions to the patient may be appropriate regarding further activity restrictions.

- The patient should be encouraged to receive prompt medical attention for any infection that could occur, whether at the operated-member level or elsewhere in the body.

- The patient should be encouraged to report to his/her surgeon any unusual changes of the operated extremity. If evidence suggests loosening of the implant (particular pain and progressive changes in the radiographs) an intensified schedule of check-ups is advised and new warning and instructions to the patient may be appropriate regarding further activity restrictions.

- The patient should be encouraged to receive prompt medical attention for any infection that could occur, whether at the operated-member level or elsewhere in the body.

- The patient should be encouraged to report to his/her surgeon any unusual changes of the operated extremity. If evidence suggests loosening of the implant (particular pain and progressive changes in the radiographs) an intensified schedule of check-ups is advised and new warning and instructions to the patient may be appropriate regarding further activity restrictions.

- The patient should be encouraged to receive prompt medical attention for any infection that could occur, whether at the operated-member level or elsewhere in the body.

- The patient should be encouraged to report to his/her surgeon any unusual changes of the operated extremity. If evidence suggests loosening of the implant (particular pain and progressive changes in the radiographs) an intensified schedule of check-ups is advised and new warning and instructions to the patient may be appropriate regarding further activity restrictions.

- The patient should be encouraged to receive prompt medical attention for any infection that could occur, whether at the operated-member level or elsewhere in the body.

- The patient should be encouraged to report to his/her surgeon any unusual changes of the operated extremity. If evidence suggests loosening of the implant (particular pain and progressive changes in the radiographs) an intensified schedule of check-ups is advised and new warning and instructions to the patient may be appropriate regarding further activity restrictions.

- The patient should be encouraged to receive prompt medical attention for any infection that could occur, whether at the operated-member level or elsewhere in the body.

- The patient should be encouraged to report to his/her surgeon any unusual changes of the operated extremity. If evidence suggests loosening of the implant (particular pain and progressive changes in the radiographs) an intensified schedule of check-ups is advised and new warning and instructions to the patient may be appropriate regarding further activity restrictions.

- The patient should be encouraged to receive prompt medical attention for any infection that could occur, whether at the operated-member level or elsewhere in the body.

- The patient should be encouraged to report to his/her surgeon any unusual changes of the operated extremity. If evidence suggests loosening of the implant (particular pain and progressive changes in the radiographs) an intensified schedule of check-ups is advised and new warning and instructions to the patient may be appropriate regarding further activity restrictions.

- The patient should be encouraged to receive prompt medical attention for any infection that could occur, whether at the operated-member level or elsewhere in the body.

- The patient should be encouraged to report to his/her surgeon any unusual changes of the operated extremity. If evidence suggests loosening of the implant (particular pain and progressive changes in the radiographs) an intensified schedule of check-ups is advised and new warning and instructions to the patient may be appropriate regarding further activity restrictions.

- The patient should be encouraged to receive prompt medical attention for any infection that could occur, whether at the operated-member level or elsewhere in the body.

- The patient should be encouraged to report to his/her surgeon any unusual changes of the operated extremity. If evidence suggests loosening of the implant (particular pain and progressive changes in the radiographs) an intensified schedule of check-ups is advised and new warning and instructions to the patient may be appropriate regarding further activity restrictions.

- The patient should be encouraged to receive prompt medical attention for any infection that could occur, whether at the operated-member level or elsewhere in the body.

- The patient should be encouraged to report to his/her surgeon any unusual changes of the operated extremity. If evidence suggests loosening of the implant (particular pain and progressive changes in the radiographs) an intensified schedule of check-ups is advised and new warning and instructions to the patient may be appropriate regarding further activity restrictions.

- The patient should be encouraged to receive prompt medical attention for any infection that could occur, whether at the operated-member level or elsewhere in the body.

- The patient should be encouraged to report to his/her surgeon any unusual changes of the operated extremity. If evidence suggests loosening of the implant (particular pain and progressive changes in the radiographs) an intensified schedule of check-ups is advised and new warning and instructions to the patient may be appropriate regarding further activity restrictions.

- The patient should be encouraged to receive prompt medical attention for any infection that could occur, whether at the operated-member level or elsewhere in the body.

- The patient should be encouraged to report to his/her surgeon any unusual changes of the operated extremity. If evidence suggests loosening of the implant (particular pain and progressive changes in the radiographs) an intensified schedule of check-ups is advised and new warning and instructions to the patient may be appropriate regarding further activity restrictions.

- The patient should be encouraged to receive prompt medical attention for any infection that could occur, whether at the operated-member level or elsewhere in the body.

- The patient should be encouraged to report to his/her surgeon any unusual changes of the operated extremity. If evidence suggests loosening of the implant (particular pain and progressive changes in the radiographs) an intensified schedule of check-ups is advised and new warning and instructions to the patient may be appropriate regarding further activity restrictions.

- The patient should be encouraged to receive prompt medical attention for any infection that could occur, whether at the operated-member level or elsewhere in the body.

- The patient should be encouraged to report to his/her surgeon any unusual changes of the operated extremity. If evidence suggests loosening of the implant (particular pain and progressive changes in the radiographs) an intensified schedule of check-ups is advised and new warning and instructions to the patient may be appropriate regarding further activity restrictions.

- The patient should be encouraged to receive prompt medical attention for any infection that could occur, whether at the operated-member level or elsewhere in the body.

- The patient should be encouraged to report to his/her surgeon any unusual changes of the operated extremity. If evidence suggests loosening of the implant (particular pain and progressive changes in the radiographs) an intensified schedule of check-ups is advised and new warning and instructions to the patient may be

maten teneinde deze te kunnen vervangen in geval van accidentele contaminatie tijdens de ingreep.  
- Er wordt aan de chirurg en zijn assistenten in de operatiezaal aanbevolen, voor een eerste implantaat, de hulpmiddelen te manipuleren teneinde zich vertrouwde te maken met het materiaal.

## 5.2. Intraoperatief

- De operatie dient te worden uitgevoerd door een specialist met de noodzakelijke opleiding in orthopedische chirurgie en die de tijden respecteert zoals beschreven in de operatiehandleidingen.
- In2Bones garandeert de kwaliteit van de hierboven omschreven implantaatindien ze samen worden gebruikt, en niet in combinatie met implantaatindien van andere fabrikanten.
- De implantaat zorgvuldig behandelen teneinde een diepe kras te vermijden (risiconeiging tot breuk).
- Het implantaat mag nooit worden bijgewerkt.
- Een alternatieve fixatiemethode moet beschikbaar zijn gedurende de operatie.
- Het openmaken van de instrumentenkit moet worden uitgevoerd volgens de aseptische voorwaarden.
- Controleer de volledige verpakking en de etiketten voor het openmaken. Geen producten gebruiken waarvan de verpakking is opengemaakt of beschadigd buiten de operatiekamer. De interne verpakking moet worden gehanteerd onder steriele voorwaarden (personen / instrumenten).
- Gebruik de beeldversterker om de plaatsing van de implantaat te controleren.
- Om de risico's op tendineuze breuk te verlagen, dient de NEOVIEW® proximaal ten opzichte van de watershed line te worden gepositioneerd.

- De NEOVIEW® plaat moet bij een volledige montage bij voorkeur worden gefixeerd met vergrendelde NEO schroeven (Locking L) en niet maximum twee (2) niet-vergrendelde NEO schroeven (Non-Locking NL).

## 5.3. Postoperatief

- De patiënt dient ervan op de hoogte worden gesteld dat een tweede, minder ingrijpende, interventie kan nodig zijn voor het verwijderen van het materiaal.
- Radiologisch onderzoek dient regelmatig te worden uitgevoerd teneinde de postoperatieve evolutie te controleren en op die manier mogelijke complicaties te voorkomen.
- De patiënt moet gedetailleerde instructies over het gebruik en de beperkingen van het hulpmiddel ontvangen. Als gedetailleerde gewichtsbelasting vóór het verkrijgen van een goede botfusie aanbevolen of vereist is, moet de patiënt erop worden gewezen dat verbuiging, losser komen en breken van de componenten complicaties zijn die kunnen ontstaan door overmatige of voortijdige gewichtsbelasting of overmatige slijeractiviteit. De postoperatieve zorg en kinesthesitherapie / fysiotherapie moeten dusdanig worden georganiseerd dat, zolang er geen sprake is van stabiliteit, belasting van het geoperereerde lichaam wordt voorkomen.
- De patiënt moet worden aangemoedigd om de chirurg te informeren over elke ongewone verandering in het geoperereerde lichaam. Indien er aanwijzingen zijn voor loslatting van het implantaat (specifieke pijn in progressieve veranderingen bij radiografisch onderzoek), is het raadzaam om over te gaan tot een intensiever follow-up programma. Daarnaast kan het aangewenzen zijn om nieuwe waarschuwingen en instructies m.b.t. beperking van activiteit aan de patiënt te geven.
- De patiënt dient te worden aangemoedigd om snel medische zorg te zoeken in het geval van infectie aan het geoperereerde lichaam of om het even waar in het lichaam.

## 5.4. Hergebruik / Hernieuwde sterilisatie

Producten bestemd voor eenmalig gebruik mogen niet hergebruikt worden (vgl. symbolen). Het hergebruiken van voorzieningen voor eenmalig gebruik kan de structurele intactheid van de voorziening aantasten en/of tot defecten leiden. Dit kan een letsel, ziekte of het overlijden van de patiënt veroorzaken. Hergebruiken houdt een risico in op besmetting van een patiënt of een ander gebruiker.

Elk implantaat dat verontreinigd is met bloed, weefselsof en/of lichaamsstoffen of -vloeistoffen mag nooit hergebruikt worden. Het moet volgens het ziekenhuisprotocol weggegooid worden. Zelfs indien een implantaat niet beschadigd lijkt te zijn, kan het fouten of schade vertonen die tot materiaalvermoeden kunnen leiden.

Het bedrijf wijst alle aansprakelijkheid voor een dergelijk hergebruik van de hand.

Het opnieuw steriliseren van de verkochte, steriele instrumenten is verboden.

## 6. Verwijderen van het implantaat na consolidatie

Bij jonge patiënten, en vooral actieve patiënten, kunnen de implantaaten loskomen, breken, migreren, kan een verhoogd risico op infectie voorkomen, kan het pijnlijken zijn, of kunnen er afwijkende verschijnselen voorkomen, zoals een normale consolidatie. Een laattijdige, tendineuze breuk kan ook voorkomen; om dat te vermijden dient elke teken van irritatie van de pezen van prominente problemen met de platte of de schroef van nabij te worden opgevolgd. De chirurg dient rekening te houden met de risico's en de voordeelen indien hij beslist een implantaat te verwijderen. Na het verwijderen van een implantaat dient postoperatieve zorg te worden voorzien om het risico op nieuwe breuken te vermijden. Indien de patiënt ouder is en niet meer heel actief is, kan de chirurg beslissen het implantaat niet te verwijderen om het risico op een nieuwe breuken te vermijden.

## 7. Opslag

De implantaat op een droge plaats bewaren.

## 8. IRM

De patiënt dient te worden gewaarschuwd systematisch te vermelden dat hij/zij een chirurgisch implantaat heeft. Dit medisch instrument (deze medische instrumenten) werden(n) niet geëvalueerd voor veiligheid en compatibiliteit in het MR-milieu.

- Controleer de volledige verpakking en de etiketten voor het openmaken. Geen producten gebruiken waarvan de verpakking is opengemaakt of beschadigd buiten de operatiekamer. De interne verpakking moet worden gehanteerd onder steriele voorwaarden (personen / instrumenten).

- Gebruik de beeldversterker om de plaatsing van de implantaat te controleren.

- Om de risico's op tendineuze breuk te verlagen, dient de NEOVIEW® proximaal ten opzichte van de watershed line te worden gepositioneerd.

- De NEOVIEW® plaat moet bij een volledige montage bij voorkeur worden gefixeerd met vergrendelde NEO schroeven (Locking L) en niet maximum twee (2) niet-vergrendelde NEO schroeven (Non-Locking NL).

## 5.3. Postoperatief

- De patiënt dient ervan op de hoogte worden gesteld dat een tweede, minder ingrijpende, interventie kan nodig zijn voor het verwijderen van het materiaal.
- Radiologisch onderzoek dient regelmatig te worden uitgevoerd teneinde de postoperatieve evolutie te controleren en op die manier mogelijke complicaties te voorkomen.
- De patiënt moet gedetailleerde instructies over het gebruik en de beperkingen van het hulpmiddel ontvangen. Als gedetailleerde gewichtsbelasting vóór het verkrijgen van een goede botfusie aanbevolen of vereist is, moet de patiënt erop worden gewezen dat verbuiging, losser komen en breken van de componenten complicaties zijn die kunnen ontstaan door overmatige of voortijdige gewichtsbelasting of overmatige slijeractiviteit. De postoperatieve zorg en kinesthesitherapie / fysiotherapie moeten dusdanig worden georganiseerd dat, zolang er geen sprake is van stabiliteit, belasting van het geoperereerde lichaam wordt voorkomen.
- De patiënt moet worden aangemoedigd om de chirurg te informeren over elke ongewone verandering in het geoperereerde lichaam. Indien er aanwijzingen zijn voor loslatting van het implantaat (specifieke pijn in progressieve veranderingen bij radiografisch onderzoek), is het raadzaam om over te gaan tot een intensiever follow-up programma. Daarnaast kan het aangewenzen zijn om nieuwe waarschuwingen en instructies m.b.t. beperking van activiteit aan de patiënt te geven.
- De patiënt dient te worden aangemoedigd om snel medische zorg te zoeken in het geval van infectie aan het geoperereerde lichaam of om het even waar in het lichaam.

## PORTUGUES

### INSTRUÇÕES DE USO – NEOVIEW®

### IMPLANTES ESTERILIZADOS PARA CIRURGIA DA MÃO PARA USO ÚNICO

Este produto deverá ser manipulado e/ou implantado por indivíduos com FORMAÇÃO, QUALIFICAÇÃO e CONHECIMENTO das presentes INSTRUÇÕES DE UTILIZAÇÃO.

## 1. Descrição do dispositivo médico

Sistema de placas e parafusos para a porção distal do rádio. Os implantes estão disponíveis em diversos tamanhos.

As placas NEOVIEW® têm que ser fixadas com os parafusos NEO.

Os parafusos NEO existem nas versões de bloco (L Locking) e não-bloco (NL Non-Locking).

A placa NEOVIEW® deve ser preferencialmente fixada com os parafusos NEO de bloco (L) e com um máximo de dois (2) parafusos NEO de não-bloco (NL) na totalidade da construção.

As placas NEOVIEW® são feitas de PEEL (poliéster éter cetonato), de acordo com a norma ASTM F2026. As placas de PEEL incluem marcadoreis radiopáticos de tântalo segundo as normas ISO 5832-3 e ASTM F136.

Estes dispositivos médicos são vendidos esterilizados.

Os elementos esterilizados mediante radiação têm sido expostos a 25 kGy de radiação gama como mínimo.

Estes dispositivos não contêm flutuantes salvo indicação contrária em laudo.

Os parafusos NEO são feitos de liga de titânio, de acordo com as normas ISO 5832-3 e ASTM F136.

Estes dispositivos médicos são vendidos esterilizados.

Het bedrijf wijst alle aansprakelijkheid voor een dergelijk hergebruik van de hand.

latos, salvo indicação contrária na etiqueta.

## 2. Indicações

O sistema de placas NEOVIEW® destina-se à fixação de fraturas intra ou extra articulares da porção distal do rádio.

## 3. Contra-indicações:

O implante não deve ser utilizado em circunstância alguma.

## 4. Avisos e precauções

O médico deve determinar se o implante é adequado para os pacientes que apresentem uma das seguintes condições:

- Não tenha uma boa condição física generalizada.

- Apresenta uma patologia óssea que corre o risco de comprometer a rigidez de fixação do dispositivo implantado (por exemplo: osteoporose, desenvolvimento quístico agudo, osteopenia aguda, tumor ósseo, etc.).

- Dependência ou utilização em excesso de drogas e/ou álcool e/ou tabaco;

- Obesidade

- Dificuldades no processo de cicatrização;

- problemas da vascularização

- Um paciente que não quer ou não é capaz de seguir as instruções do pós-operatório.

Entre as complicações que podem surgir, sem limitar a estas, incluem-se:

- Dor, sensações de desconforto ou anormais relacionadas com a presença do implante.

- Flexão, descolamento e/ou rotação do material

- Migração da posição do implante

- Perda óssea provocada pelo desgaste da proteção.

- Recorrência da deformação, perda da correção

- Atraso na consolidação ou pseudartrose.

- Infecções; Hematomas; Alergias; Trombos;

- Rotação de tendão, incluindo rotação tardia

- Irritação/lesão de tendões

- Ossificação heterotópica

- Síndrome compartimental

- Lesões/irritações no nervo

## 5. Utilização dos produtos

O conhecimento das técnicas operatórias, uma adequada redução da fratura óssea, a seleção e a colocação do implante e a gestão do pós-operatório do paciente são condições essenciais para a obtenção dos resultados satisfatórios.

Os critérios de seleção do paciente são da responsabilidade do cirurgião. Cada cirurgião deve avaliar a pertinência do procedimento e dos instrumentos utilizados durante a intervenção tendo em conta a sua formação e a sua experiência.

## 5.1. Pré-operatório

- Ler atentamente a técnica operatória.

- Apesar os auxiliares de implantação concebidos e fornecidos por In2Bones deverão ser utilizados em combinação com o implante.

- Preparar todos os implantes e auxiliares necessários à intervenção.

- Não tentar efetuar uma intervenção com o protocolo hospitalar.

In2Bones sugere que o cirurgião deve ter conhecimento de que é capaz de seguir as garantias em verba com este dispositivo.
